

Suggested Maintenance – Below

Smart Service

Maintenance is "LESS" Costly than Repairs

Needed Service	6 Mos	12 Mos	18 Mos	24 Mos	30 Mos	36 Mos	42 Mos	48 Mos	54 Mos	60 Mos
Remove wheel bearings, clean and inspect, repack with new grease, install with new seals. Inspect and check brake adjustment		X		X		X		X		X
Brake spin test operation/adjustment check	X	X	X	X	X	X	X	X	X	X
Roof tune-up, seal small voids and seam gaps		X		X		X		X		X
Clean and treat rubber roof material		X		X		X		X		X
Slide room maintenance, check adjustment, lube, seals		X		X		X		X		X
Air conditioner performance test/diagnosis (new filter is additional)		X		X		X		X		X
Perform LP pressure/leak test, set regulator if needed	X	X	X	X	X	X	X	X	X	X
Furnace tune-up cleaning or diagnosis (furnace removal maybe required)		X		X		X		X		X
Water heater tune-up, cleaning or diagnosis		X		X		X		X		X
Refrigerator tune-up, cleaning or diagnosis		X		X		X		X		X
Readjust weight distribution or 5th wheel hitch height		As Needed								
Endless warranty annual inspection		X		X		X		X	X	
Electric brake controller & 7 pin connector test		As Needed								
Wash exterior or roof		X		X		X		X		X
Peace of mind inspection includes: Endless warranty inspection, clean furnace, water heater and refrigerator burners. Inspect roof A/C and clean, lube locks, latches, step, stabilizers and coupler. Service batteries, test 110 polarity and 12 volt charging, flush holding tanks and install black tank chemical. Condition slide sweep seals, inspect tires and adjust pressure. Perform an LP leak test.		X		X		X		X		X

Menu Explanations

Wheel Bearing Inspection: We will remove all wheel bearings, clean, inspect and repack with new grease. Then reinstall with new seals, clean brakes, and test/adjust brake system. You do not want to be left on the side of the road. Perform yearly or 12000 miles whichever comes first on ALL towable RV's.

Suspension/Brake Check: We check the axle springs and shackles and perform brake operation spin check and adjustment. Perform between wheel bearing service, every 6 months.

Roof Tune-Up: Have the roof inspected yearly and seal small voids and cracks by an RV technician. It is better to do a little each year than a lot in the future or when you get a leak. The owner should perform a visual inspection every 90 days. Manufactures only warranty sealants for the 1st 90 days of ownership.

Air Conditioner Performance Test: We clean the evaporator coils, cooling fins and filter. We then test A/C output temperature. (New filters are additional if needed)

LP Leak Test and Regulator Lock-up Test: Twice yearly in the first year, then every year there after you should perform this test as small leaks only get bigger.

Gas Appliance Tune-up or Cleaning: Yearly you should clean the burner assemblies in the gas appliances; this is the first step in troubleshooting failure of these appliances. So, stay on top of them. Perform the Annual Inspection so an RV Technician can identify any problems.

Peace of Mind Maintenance Package: We will perform a peace of mind inspection for our customers. We will perform an LP leak check, operate all appliances, service/test batteries and check 12- and 100-volt electrical system, lubricate stabilizers, steps, door and compartment locks. This is good idea to perform yearly to avoid any reliability issues.

Winterize and De-winterize: This is a must to avoid costly damage to your unit. We will drain the freshwater system, drain and by-pass water heater, then flush the system with RV antifreeze. When de-winterizing we will reverse the above and flush/pressure test water system. Do this with an annual system check out.

Endless Warranty: For those who have this awesome program, you must have it inspected yearly. If anything is noticed that needs attention, we will let you know first.

Slide-Room Maintenance: We will check the adjustment, inspect/lubricate slide seals.

Clean and Wax Coach: This fiberglass material needs cleaned yearly and then apply wax to protect the coach from fading. Can be done by owner. See parts for cleaners.

Clean and Treat the Roof: Roof material needs protectant applied and after cleaning is a good time for this, perform this yearly. The owner can do this. See parts for supplies needed.

Electric Brake Controller: Test brake controller and 7 pin wiring on tow vehicle.

Equalizer and Fifth Wheel Adjustment: When purchasing a new tow vehicle make sure you have the hitch adjusted by a professional RV Technician.

The above maintenance will meet or exceed your manufactures requirement for warranty.
